Link App in 2.4 GHz WiFi network

(2.4 GHz network is the most widely used and is always available, regardless of type and brand of Wi-Fi access point.)

Enter the name of the WiFi network in which the fireplace is to operate

Enter the Password that belongs to the relevant WiFi network

If the Xaralyn fire has previously been connected to another WiFi network, disconnect the appliance from the power for at least 10 seconds by removing the plug from the socket.

Then replace the plug.

(With a Xaralyn fire, no light will flicker as indicated in step 3)

After pressing the "Next" button in the App, press and hold the "Flame" button on the fire for at least 15 seconds. You will then see "CCC" on the screen of the fire.

The fireplace and App are connected.

If this does not work immediately, repeat this and the previous step.

Make sure that the quality of the WiFi connection is optimal, with a moderate WiFi connection, the so-called pairing is difficult or does not work.

Tip: for quick and easy pairing of App and fireplace, it is useful to do this close to a WiFi access point.

The Xaralyn fireplace and App are now connected. By default the App gives your fireplace a name, usually this is Fireplace 2. You can change this later in the App settings.

Click on "Continue"

You are now in the operating screen of the App..

All functions available on Xaralyn fireplaces can be found here.

It is possible that your fireplace does not have all the functions that appear in the App.

Settings in the App can be changed / viewed by clicking on the "pencil" at the top right.

You have clicked on the "pencil" in the top right corner.

You can now see all settings and information and here you can also change the name of the fireplace.

For example:

Living room, fireplace 1

Kitchen fireplace

Bedroom fireplace

We have the fireplace instead of "Fireplace 2" called the fireplace "Xaralyn Castello".
